13 PASSENGER SEXUAL ASSAULT
14 LITIGATION
15
16

17 **MDL No. 3084 CRB**
18
19

20 **[PROPOSED] ORDER GOVERNING THE**
21 **PRODUCTION OF ELECTRONICALLY**
22 **STORED INFORMATION AND HARD**
23 **COPY DOCUMENTS**
24

25 This Document Relates to:
ALL ACTIONS

1 **1. PURPOSE**

2 This Order Governing the Production of Electronically Stored Information and Hard Copy
3 Documents (“ESI Order”) will govern discovery of electronically stored information and any hard
4 copy documents in this Litigation as a supplement to the Federal Rules of Civil Procedure and this
5 District’s Guidelines for the Discovery of Electronically Stored Information (“ESI Guidelines”)¹
6 and Checklist for Rule 26(f) Meet and Confer Regarding Electronically Stored Information (“ESI
7 Checklist”)², and any other applicable orders and rules. Nothing in this Order is intended to
8 expand or limit the obligations of a party or non-party as otherwise required by law. “This
9 Litigation” includes all actions currently in IN RE: UBER TECHNOLOGIES, INC. PASSENGER
10 SEXUAL ASSAULT LITIGATION, or hereafter added or transferred to MDL No. 3084, and all

² <https://www.casd.uscourts.gov/judges/leshner/docs/Electronically%20Stored%20Information%20Checklist.pdf>

1 actions later remanded to their respective transferor courts.

2 **2. DEFINITIONS**

3 a) "And" and "or" shall be construed conjunctively or disjunctively as necessary to
4 make their use inclusive rather than exclusive, e.g., "and" shall be construed to mean "and/or."

5 b) "Defendant" or "Defendants" means the named defendants in the above-captioned
6 matter, as well as any later added defendants. "Uber Defendants" means Uber Technologies, Inc.,
7 Rasier, LLC, and Rasier-CA, LLC.

8 c) "Document" is defined to be synonymous in meaning and equal in scope to the
9 usage of this term in Rules 26 and 34 of the Federal Rules of Civil Procedure and shall include
10 Hard-Copy Documents and ESI.

11 d) "Electronically stored information" or "ESI," as used herein has the same meaning
12 as in Federal Rules of Civil Procedure 26 and 34. For avoidance of doubt, ESI includes
13 Documents existing in electronic form at the time of collection, including but not limited to: email
14 messages (including all active messages and archived or otherwise stored messages), other
15 electronic messaging platforms (such as instant messaging, chat messaging, app-based messaging,
16 Slack messaging, and collaboration tool messaging), calendar items, address book entries,
17 voicemails, recorded phone calls, memoranda, letters, reports, presentations, spreadsheets,
18 databases, charts, handwritten notes, and any storage media.

19 e) "Hard-Copy Document" means Documents existing in paper form at the time of
20 collection.

21 f) "Native Format" means and refers to the format of ESI in which it was generated
22 and/or as used by the producing party in the usual course of its business and in its regularly
23 conducted activities.

24 g) "Metadata" means: (i) structured, i.e., fielded, information embedded in a native

1 file which describes, inter alia, the characteristics, origins, usage, and/or validity of the electronic
2 file; (ii) information generated automatically by the operation of a computer or other information
3 technology system when a native file is created, modified, transmitted, deleted, or otherwise
4 manipulated by a user of such system, (iii) information, such as Bates numbers, created during the
5 course of processing documents or ESI for production, and (iv) information collected during the
6 course of collecting documents or ESI, such as the name of the media device, or the custodian or
7 non-custodial data source from which it was collected.

8 h) "Attachment(s)" shall be interpreted broadly and includes, e.g., traditional email
9 attachments and documents embedded in other documents (e.g., Excel files embedded in
10 PowerPoint files) as well as modern attachments, pointers, internal or non-public documents
11 linked, hyperlinked, stubbed or otherwise pointed to within or as part of other ESI (including but
12 not limited to email, messages, comments or posts, or other documents).

13 i) "Party" or "Parties" means any person, business organization, or legal entity that is
14 a named plaintiff or defendant in any filed case consolidated under this MDL.

15 j) "Non-Party" or "Non-Parties" means any person, business, organization, or legal
16 entity that is not a named plaintiff or defendant in any filed case consolidated under this MDL.

17 k) "Requesting Party" means the Party requesting the production of Documents.

18 1) “Producing Party” means the Party that may be producing Documents in
19 response to a request by the Requesting Party.

20 m) "Protective Order" means the Protective Order issued by the Court in MDL No. 3084, and filed on the docket 3:23-md-03084-CRB at ECF No. 176.

22 n) "Searchable Text" means the native text extracted from an Electronic Document
23 and any Optical Character Recognition text ("OCR text") generated from a Hard-Copy Document
24 or electronic image.

- o) "Media" means an object or device, real or virtual, including but not limited to a disc, tape, computer, or other device on which data is or was stored.

p) “Optical Character Recognition” or “OCR” means the process of recognizing, and creating a file containing, visible text within an image.

q) “Load File(s)” means electronic files provided with a production set of documents and images used to load that production set into a receiving party’s document review platform and correlate its data within that platform.

r) "Include" and "Including" shall be construed to mean "include but not be limited to" and "including, but not limited to."

10 s) "Plaintiff" refers to the named plaintiffs in the above-captioned matter, as well as
11 any later added plaintiffs.

12 t) "Parent-child" shall be construed to mean the association between an attachment
13 and its parent Document in a Document family.

14 u) Any reference to the singular shall also be deemed to refer to the plural, and vice-
15 versa.

16 | 3. COOPERATION

17 The Parties are aware of the importance the Court places on cooperation and commit to
18 cooperate in good faith throughout this Litigation consistent with this Court's Guidelines for the
19 Discovery of ESI and this Court's Rules of Professional Conduct. The Parties will endeavor to
20 cooperate in good faith and be reasonably transparent in all aspects of the discovery process,
21 including the identification, preservation, and collection of sources of potentially relevant ESI, as
22 well as propounding reasonably particular discovery requests, establishing proportional limits on
23 the scope of potentially relevant and discoverable ESI, while endeavoring to identify and produce
24 potentially relevant and discoverable ESI, and maintaining security over the discovery in this

1 Litigation

2 Nothing in this Protocol shall be deemed to constitute a waiver of any objections a
3 Producing Party may have with respect to any discovery demand.

4 Nothing in this Protocol shall be deemed to prevent a Party from seeking the Court's
5 intervention, pursuant to the Court's Standing Order for discovery disputes, with respect to any
6 issues that may arise regarding the application of this ESI Order to a Document request issued to a
7 Producing Party and/or any responses or objections a Producing Party may have with respect to
8 any such request, if the Parties are unable to resolve any such issues, responses, or objections
9 without the Court's assistance. Likewise, nothing in this ESI Order shall be deemed to prevent any
10 other Party from opposing relief sought from the Court.

11 **4. LIAISON**

12 The Parties will identify Discovery Liaisons to each other for purposes of meeting and
13 conferring on ESI topics. Counsel for Plaintiffs and Uber shall designate their respective ESI
14 liaisons within 30 days of entry of this order, and thereafter the designation may be updated by
15 counsel via email with 10 days' notice.

16 **5. PRESERVATION**

17 The Parties' preservation obligations are currently set forth in PTO No. 2. Nothing
18 contained herein shall be construed to abrogate, minimize, or expand the preservation
19 requirements described in PTO No. 2 or a later entered order of the Court.

20 **6. INADVERTENT PRODUCTION OF PRIVILEGED MATERIAL**

21 The inadvertent production of information subject to protection by the attorney-client
22 privilege, the work-product, joint defense, or other similar doctrine, or by another legal privilege
23 protecting information from discovery, shall be addressed pursuant to Section 11 of the Protective
24 Order and the Privilege Order once entered by the Court.

7. IDENTIFICATION OF CUSTODIAL AND NON-CUSTODIAL DOCUMENTS AND ESI

The Parties will disclose a preliminary list of (a) custodians likely to possess potentially relevant information, (b) custodial and non-custodial data sources likely to contain potentially relevant Documents and ESI, and (c) third parties likely to possess potentially relevant information in accordance with Fed. R. Civ. P. 26(f), this District's ESI Guidelines, any applicable Orders entered including PTO No. 5 and participate in Rule 26(f) discussions guided by this District's ESI Checklist.

Once discovery requests have been propounded under Fed. R. Civ. P. 34, the parties will further meet and confer regarding those custodians and custodial and non-custodial data sources from which Documents and ESI will be collected for review for potential production in this litigation.

The custodian and data source exchanges will include brief explanations of the rationale for their selections; for example, for custodians, their current job titles, dates of employment, and descriptions of their work, and for data sources, location information and description.

As stated in PTO No. 2, sources of ESI may include, without limitation, for both corporate and personal accounts: (1) email systems; (2) mobile device data; (3) text and messaging applications (e.g., iMessage, WhatsApp, Facebook Messenger, SnapChat, WeChat, Signal, Wickr, Telegram, uChat, and HipChat); (4) Workplace collaboration tools and chat applications (i.e., Slack and Microsoft Teams); (5) social media accounts; (6) unstructured data (e.g., documents created by commonly used Microsoft Office programs and Google programs); (7) structured data (e.g., information stored in structured databases like Salesforce and Basecamp); (8) wearable devices (e.g., data from watches or tags); (9) backup media (e.g., data from tapes, discs, or cloud accounts); (10) external storage media (e.g., portable hard drives or flash drives); (11) voicemail

1 systems; and (12) video surveillance systems.

2 The Parties agree that if the Producing Party determines a source is not “reasonably
3 accessible” pursuant to Fed. R. Civ. P. 26(b) during the search and collection process it will
4 provide sufficient information regarding the accessibility of the source to enable the Parties to
5 confer in good faith within seven (7) days of this determination about whether such source or
6 Document will be produced or methods by which the information can be produced. If the Parties
7 disagree as to the accessibility of the source after a good faith meet and confer, the Party seeking
8 discovery from the source may submit the issue to the Court or its designee in accordance with the
9 Court’s procedures. The Parties agree to take any unresolved disputes on same promptly to the
10 Court or its designee.

11 **8. SEARCH QUERIES AND METHODOLOGIES**

12 Pursuant to Fed. R. Civ. P. 26(f), and the ESI Guidelines, the Parties shall meet and confer,
13 on the application, if any, of search or other filtering technologies, including search terms, file
14 types, date ranges, transparent validation procedures and random sampling, predictive coding or
15 other appropriate advanced technology, including systems used to track review status related to
16 those advanced technologies. The Parties are expected to work in a cooperative, collaborative,
17 and iterative manner, in order to reach agreement upon a reasonable search methodology to
18 achieve an appropriate level of recall (the percentage of responsive Documents in the collection
19 against which the search terms were run which include a search term). To the extent the Parties are
20 unable to reach agreement on the application of, or procedures for, any search or filtering
21 processes, the Parties shall raise such issues for resolution by the Court or its designee. The Parties
22 recognize that as the litigation evolves, there may be a need to supplement earlier agreed methods
23 or search terms to enhance or improve the identification of potentially relevant ESI.

24

25

1 a) Use of TAR by the Uber Defendants.2 1. Overview.

3 As part of document review, the Uber Defendants intend to use TAR methodology known
4 as TAR 2.0, which utilizes continuous active learning to classify and prioritize documents for
5 attorneys to review. Specifically, the Uber Defendants intend to use Relativity Active Learning
6 ("RAL") on a Relativity Server 12.1.537.3 platform provided by their vendor Lighthouse.
7 Commonly, a TAR 2.0 methodology begins with ingesting document population into the TAR 2.0
8 software where the algorithm learns to distinguish relevant from non-relevant documents through
9 attorney review of documents. The TAR 2.0 algorithm prioritizes the documents in the review
10 queue from most to least likely to be responsive. Attorney reviewers then review documents the
11 TAR 2.0 model has prioritized as most likely to be responsive in descending order from most to
12 least likely to be responsive. As the review continues and reviewers code documents, the TAR 2.0
13 model continues to learn and prioritize likely responsive documents until a stopping point is
14 reached and a validation is conducted.

15 2. TAR and Search Terms

16 TAR processing will not be "stacked" with the application of search terms, i.e., search
17 terms will not be applied before or, unless agreed or ordered pursuant to Section 6.x below, after
18 any application of TAR.

19 3. Sample Set.

20 i. The Parties' TAR approach will include the use of a Sample Set to help
21 assure that the Parties have a sufficient level of agreement on what
22 constitutes responsiveness and non-responsiveness.

23 ii. The Sample Set will be created by drawing a simple random sample of
24 1,750 documents from the collection to which TAR will be applied.

1 issue shall be submitted to the Court for resolution.

2 iv. Plaintiffs' Designated Reviewers shall not remove from the location or
3 locations mutually agreed to by the Parties, any documents to which they
4 are provided access in connection with the Sample Set review process, and
5 shall not copy, record, print, image, photograph, fax, scan, or otherwise
6 capture, transmit or share any document or any information contained
7 therein, in any way, with anyone beyond the other Plaintiffs' Designated
8 Reviewers conducting the review. Any document in native format accessed
9 via secured web browser and opened in a native application by any
10 Plaintiffs' Designated Reviewer will be immediately deleted after it has
11 been viewed in the native application.

12 4. TAR Training Process

13 i. The Uber Defendants will start the TAR tool's active learning process with
14 the Parties' agreed-upon coded documents from the Sample Set, after which
15 the system will automatically select documents for review based on
16 predicted relevance.

17 ii. Based on the reviewer coding of other documents, each document will
18 eventually receive a score from 0-100, with documents closer to zero not
19 likely to be relevant and documents closer to 100 considered very likely to
20 be relevant.

21 iii. The predictive model the TAR tool uses will update itself continuously
22 without need for human intervention.

23 iv. The TAR tool may automatically exclude duplicative documents from the
24 review queue in order to avoid delays in training the model. These

1 documents will still receive a classification score, and suppressed
2 documents above or equal to the lowest score of any document classified as
3 responsive by a reviewer will be reviewed at the end of the process.

4 5. Stopping Criteria

5 i. Once two or more consecutive review batches sequentially populated by the
6 highest-ranking uncoded documents remaining in the project in order from
7 highest to lowest scores and containing a total of at least 1,000 documents
8 are found to contain 10% or fewer documents marked responsive,
9 Defendants will pause the review and turn to validation. Defendants may
10 extend the review past this point if they believe sufficient thoroughness has
11 not been achieved. Defendants do not intend for the relevant batches to
12 include index health documents.

13 ii. The responsiveness rate will be calculated only over documents drawn
14 directly into the prioritized review queue due to their own predicted
15 relevance score (“primary documents”). It will not include family members
16 of these primary documents, even if said family members are reviewed at
17 the same time as said primary documents.

18 6. Validation

19 i. A Validation Sample consisting of three strata will be drawn from the entire
20 TAR population. 500 documents will be drawn, at random, from documents
21 coded responsive prior to validation; 500 documents will be drawn, at
22 random, from documents coded nonresponsive prior to validation; and
23 2,000 documents will be drawn, at random, from documents not coded prior
24 to validation (i.e., the null set). This will ensure an estimate of Richness

1 with a margin of error no larger than 2.1% at 95% confidence. As for all
2 statistical estimates, the precise margin of error can only be known after the
3 sample is reviewed.

4 ii. For the purpose of determining which sampling stratum a document falls in,
5 only the direct coding status of that document will be considered, not any
6 coding it may inherit due membership in a family. For instance, a
7 document coded non-responsive will fall in the non-responsive stratum,
8 even if it is a family member of a document coded as responsive.

9 iii. The 3,000 documents will be reviewed *de novo* for responsiveness by
10 Defendants, interleaved in random order, with no indication to the reviewer
11 of their prior coding status.

12 iv. Recall and Richness will be calculated using the following quantities:

13 1. the number of documents in the TAR population that were coded
14 responsive prior to validation;

15 2. the number of documents sampled from (1) that are coded
16 responsive in the *de novo* review;

17 3. the number of documents in the TAR population that were coded
18 nonresponsive prior to validation;

19 4. the number of documents sampled from (3) that are coded
20 responsive in the *de novo* review;

21 5. the number of responsive documents in the TAR population that
22 were not coded prior to validation; and,

23 6. the number of documents from (5) that are coded responsive in the
24 *de novo* review.

- 1 v. Recall = $[(1) \div 500 \times (2)] \div [(1) \div 500 \times (2) + (3) \div 500 \times (4) + (5) \div 2000 \times (6)]$
- 2 vi. Richness = $[(1) \div 500 \times (2) + (3) \div 500 \times (4) + (5) \div 2000 \times (6)] \div [(1) + (3) + (5)]$
- 3 vii. The Uber Defendants will disclose the calculated Recall and Richness and
- 4 the input quantities used to calculate Recall and Richness.
- 5 viii. Plaintiffs' Designated Reviewers shall have the opportunity to review all
- 6 non-privileged documents in the Validation Sample, without any knowledge
- 7 of how any individual documents were coded by the Uber Defendants, in
- 8 order to perform a blind comparison of the provided Recall and Richness
- 9 estimates.
- 10 ix. This review may take place (a) at such location or locations mutually agreed
- 11 by the Parties, on a date and time to be agreed to by the Parties, or (b) via a
- 12 secure web-based viewer on a date and time to be agreed to by the Parties.
- 13 Any documents coded Not Responsive by the Uber Defendants to which
- 14 Plaintiffs' Designated Reviewers are provided access as part of this review
- 15 are provided for the limited and sole purpose of raising and resolving
- 16 disagreements, if any, regarding the coding calls made by the Uber
- 17 Defendants. Any such disagreements shall be recorded on a TAR Protocol
- 18 Classification Dispute Log (the "Log"), which shall be in a form agreed
- 19 upon by the Parties. Once Plaintiffs' Designated Reviewers complete their
- 20 review of the Validation Sample, the Parties shall meet and confer to
- 21 resolve any differences in coding designation. If resolution cannot be
- 22 reached, the issue shall be submitted to the Court for resolution.
- 23 x. If the recall estimate derived from the validation sample is below 80%, or if
- 24 the documents designated responsive in the part of the sample drawn from

1 the null set indicate that the TAR tool's model of Responsiveness was too
2 limited, e.g., if the responsive documents in the Validation Sample included
3 novel or significant documents, then Plaintiffs and Defendants will discuss
4 remedial action to locate an adequate proportion of the remaining relevant
5 documents in the null set, including but not limited to: continuing reviewing
6 from the prioritized queue; and training alternative predictive models
7 focused on the relevant documents found in the elusion test. After
8 Defendants disclose these metrics, the parties may meet and confer to
9 discuss questions and issues relating to the TAR process.

10 b) Disclosures

11 1. Once the TAR process is complete in addition to above, Defendants intend
12 to disclose various metrics regarding the TAR 2.0 methodology utilized, including the following:
13 (i) the total TAR population, (ii) the total population produced, (iii) the total population not
14 produced, (iv) the total population not reviewed, (v) the size of the validation set used to verify the
15 TAR 2.0 results, and (vi) a summary of the validation process. The summary of the validation
16 process will include the following figures from the Validation Sample: (a) the number of
17 documents within the sample that were previously coded relevant; (b) the number of documents
18 within the sample that were previously coded not relevant; (c) the number of unreviewed
19 documents within the sample. The summary of the validation process will also include the
20 number of actual responsive documents identified in (a), (b), and (c) during the validation process.
21 Defendants will also produce all non-privileged responsive documents in the Validation Sample.
22 After Defendants disclose these metrics, the parties may meet and confer to discuss questions and

1 issues relating to the TAR process.

2 c) Key Word Search.

3 1. If the Producing Party is identifying responsive ESI, which is not already
4 known to be responsive, using search terms, the Parties will meet and confer about search terms
5 in English and any other languages used in the Producing Party's documents. The Parties will
6 meet and confer about information to improve the effectiveness of the search terms, such as
7 providing a list of relevant English and foreign language company terminology (or equivalent)
8 and all relevant project and code names, code words, acronyms, abbreviations, and nicknames, if
9 any. Before implementing search terms, the Producing Party will disclose information and meet
10 and confer within seven (7) days of the ESI Protocol being entered regarding the search platform
11 to be used, a list of search terms in the exact forms that they will be applied (i.e., as adapted to the
12 operators and syntax of the search platform), significant or common misspellings of the listed
13 search terms in the collection to be searched, including any search term variants identifiable
14 through a Relativity dictionary search with the fuzziness level set to 3, any date filters, or other
15 culling methods, after which the Receiving Party may propose additional terms or culling
16 parameters. Use of search terms will be validated post-review using comparable methodology
17 and metrics to those set out in Disclosures (a) and (c) above.

18 2. Nothing in this ESI Order may be construed or interpreted as precluding a
19 Producing Party from performing a review to determine if documents captured by search terms
20 are in fact responsive to the Requesting Party's discovery requests. Similarly, nothing in this ESI
21 Order may be construed or interpreted as precluding a Producing Party from performing, by any
22 means, a privilege review of documents determined to be responsive. Further, nothing in this ESI
23 Order requires the production of documents captured by any search term that are not relevant and
24 responsive to the Requesting Party's request, that are privileged, or that are otherwise protected

1 from disclosure.

2 **9. END-TO-END VALIDATION OF DEFENDANTS' SEARCH METHODOLOGY**
 3 **AND RESULTS**

4 The Parties shall participate in an iterative and cooperative approach in which the Parties
 5 will meet and confer regarding reasonable and appropriate validation procedures and random
 6 sampling of Defendants' Documents (both of relevant and non-relevant sets and of the entire
 7 collection against which search terms were run or TAR or other identification or classification
 8 methodology was used), in order to establish that an appropriate level of end-to-end recall (the
 9 percentage of responsive Documents in the initial collection before any search terms or TAR or
 10 manual review was applied which were classified as responsive after Defendants search, TAR and
 11 review processes) has been achieved and ensure that the Defendants' search, classification and
 12 review methodology was effective and that a reasonable percentage of responsive ESI was
 13 identified as responsive being omitted.

14 **10. UNSEARCHABLE DOCUMENTS**

15 Documents which are reasonably believed to be responsive and for which text-based
 16 search technologies are fundamentally ineffective, such as images, video, certain spreadsheets,
 17 certain hard copy documents, certain documents from noncustodial sources, or certain foreign
 18 language documents where the Parties do not have suitable search terms in such language, must be
 19 reviewed without culling by search terms, predictive coding, or other technologies that rely
 20 primarily on text within the document. Prior to the production of such unsearchable items, the
 21 Producing Party may conduct a page-by-page review for responsiveness, confidentiality, privilege,
 22 and other protections.

23 **11. REASSESSMENT**

24 After the completion of the search methodology meet and confer sessions and/or after

1 completion of the selected search process itself, a Producing Party, a Receiving Party, or the Court
2 may perceive the need to reassess a search methodology and/or validation process. In all such
3 circumstances, the Parties will meet and confer to address any issues in a reasonable and timely
4 manner; and the time, cost, and/or other resources expended in connection with ineffective
5 methodologies and/or processes shall be deemed irrelevant to the issues of reasonableness and
6 proportionality for additional efforts required.

7 **12. SYSTEM FILES**

8 Each Party will use its best efforts to filter out common system files and application
9 executable files using the national software reference library (“NSRL”) NIST hash set list. The
10 Parties shall meet and confer on methods for excluding any other non-substantive files and folders
11 that are reasonably identified as system files and not likely to contain user-created files or content.

12 **13. DEDUPLICATION**

13 Each Party shall make reasonable efforts to globally de-duplicate exact duplicate
14 Documents within the Party’s ESI data set across all custodians at the family level. Documents
15 should be de-duplicated at the family level using MD5 hash values, or SHA-1 hash values, or the
16 SourceHash value generated by Google for Google Drive documents, or comparable industry
17 standard hash algorithm disclosed by such Party. “Exact duplicate” shall mean bit-for-bit identity
18 of the Document content with exact Hash Value matches. Parties shall disclose the methodology,
19 e.g., industry standard program (including any variable parameters), being used to calculate the
20 hash values for individual emails and email families. Any such methodology must ensure that an
21 email that includes content in the “BCC” or other blind copy field shall not be treated as a
22 duplicate of any otherwise identical email that does not include content in the “BCC” or other
23 blind copy field. Emails shall be deduplicated at the family level and standalone documents shall
24 not be deduplicated against attachments. The names of all custodians and non-custodial sources

1 who were in possession of a document prior to deduplication will be populated in the “ALL
2 CUSTODIAN” metadata field, separated by semi-colons, in addition to a separate field of data
3 identifying the custodian whose Document is produced; such de-duplicated Documents shall be
4 deemed produced from the custodial files of each such identified custodian for all purposes in this
5 litigation, including for use at deposition and trial. The original file paths of a Document prior to
6 deduplication will be populated in the “ALL FILE PATHS” metadata field, separated by
7 semicolons, in the order corresponding to the order of names in ALL CUSTODIANS. Hard-Copy
8 Documents shall not be eliminated as duplicates of ESI.

9 **14. NO EMAIL THREADING**

10 No email may be withheld from production because it is included in whole or in part in a
11 more inclusive email, although Parties may use email threading for their own internal review and
12 other internal processes.

13 **15. SOURCE CODE**

14 The Parties will meet and confer to address the production and/or inspection of source code
15 and enter into a separate order governing the same.

16 **16. PRODUCTION FORMATS**

17 The Parties agree to produce documents and data in the formats described in Appendix 1 to
18 this ESI Order. If particular Documents or categories of Documents identified in response to
19 document requests warrant a different format, the Parties will cooperate to arrange for the
20 mutually acceptable production of such documents. The Parties further agree not to degrade the
21 searchability of Documents as part of the Document production process. Google file types, e.g.,
22 Google docs, sheets and slides, shall be produced as their Microsoft equivalents, i.e., Google docs
23 files shall be produced as Microsoft Word files, and Google sheets shall be produced as Microsoft
24 Excel Files, etc.

1

2 **17. PHASING**

3 Once the Parties begin propounding discovery requests pursuant to Fed. R. Civ. P. 34,
4 the Parties agree to meet and confer regarding appropriate phasing for the production of ESI to the
5 degree efficient and feasible.

6 **18. CLOUD STORED DOCUMENTS**

7 a. Metadata Preserved.

8 Uber shall preserve the metadata relationship between email messages with links to files
9 on Google Drive. Uber shall preserve and produce (including, if necessary, as custom fields) all
10 metadata collected with respect to all cloud-stored documents. That includes, but is not limited to,
11 all metadata output by Google Vault when exporting a matter. Thus, the metadata exported from
12 Google Vault pertaining to each document shall be preserved and produced as metadata for the
13 same document within the load file of any production containing any such document.

14 b. Hyperlinked/URL-Referenced Documents.

15 Producing party shall make all reasonable efforts to maintain and preserve the relationship
16 between any message or email and any cloud-hosted document hyperlinked or referenced within
17 the message or email. Thus, for instance, where a collected message or email links to or references
18 by URL a document on Google Drive (or housed within Google vault,) the metadata for that
19 message or email shall include the URLs and Google Document ID of all hyperlinked documents,
20 and if a hyperlinked document was produced.

21 c. Contemporaneous Versions of Hyperlinked/URL-Referenced Documents.

22 Uber shall produce the contemporaneous document version, i.e., the document version
23 likely present at the time an email or message was sent, of Google Drive documents referenced by
24 URL or hyperlinks in emails or messages such as Slack. If Uber contends that it is unable to meet

1 this requirement through commercial or vendor software, Google APIs or through other
2 reasonable manual or automated means, then Plaintiffs and Defendants shall meet and confer to
3 discuss solutions. This will not exempt Uber from producing the applicable version of any
4 document so referenced by URL or hyperlink.

5 **19. PLAINTIFFS' PRODUCTION OF ESI AND CASE SPECIFIC DOCUMENTS**

6 This provision does not apply to Plaintiff's Fact Sheet (PFS) and/or documents produced
7 with the PFS as they are the subject of a separate Order. The parties shall further agree to confer
8 concerning the production format (e.g., pdfs) and associated matters (e.g., hosting platform to the
9 extent not already negotiated) for Plaintiff specific documents. Any Plaintiffs who are selected to
10 proceed forward towards a trial date will meet and confer with Defendants about the technical
11 aspects of these Plaintiffs' production of non-privileged documents as appropriate during the
12 course of those Plaintiffs' specific Rule 26 formal discovery. This provision shall not limit any
13 Plaintiff's obligation to produce discovery that the Court or Federal Rules of Civil Procedure may
14 require before being selected for trial. Plaintiffs will meet and confer with Defendants about
15 these issues after such formal discovery is propounded. No other provision of the ESI Order will
16 apply to Plaintiffs but for the terms set forth herein. Nothing herein shall limit Defendants' rights
17 to seek discovery from Plaintiffs.

18 **20. MISCELLANEOUS PROVISIONS**

19 a) Translations Of Produced Materials. The Producing Party has no obligation to
20 create a translation of the Documents or any portion thereof. For any foreign-language documents
21 responsive to document requests that a Party reasonably knows as the result of a reasonable
22 investigation have been translated into the English language using human translators or through
23 machine translation in the ordinary course of business or for its own purposes, except to the extent
24 such translation is protected by attorney-client or work-product privileges, the Producing Party

1 shall produce the translation of the original document with the original. The Parties will meet and
2 confer as necessary concerning procedures for using translations at depositions and at trial. In the
3 event the Parties cannot reach agreement, the matter may be submitted to the Court for
4 determination.

5 b) Non-Party Documents. A Party that issues a Non-Party subpoena (“Issuing Party”)
6 shall include a copy of this Order with the subpoena and state that (1) the subpoenaed Non-Party
7 should produce Documents in response to the subpoena to all Parties; and (2) the Parties to this
8 Litigation have requested that Non-Parties produce Documents in accordance with the
9 specifications set forth herein. If a subpoenaed Non-Party produces Documents to the Issuing
10 Party but does not produce those Documents to other Parties, the Issuing Party shall produce such
11 Documents to those other Parties within 14 days of receiving the Documents, except where the
12 Documents are to be used in a deposition, in which case the Issuing Party shall produce such
13 Documents to all other Parties no later than three (3) days prior to the deposition, or as soon as
14 reasonably practicable if such production occurs thereafter. Nothing in this Order is intended or
15 may be interpreted to narrow, expand, or otherwise affect the rights of the Parties or Third Parties
16 to object to a subpoena. If a Non-Party production is not Bates-stamped, the Parties will meet and
17 confer to agree upon a format for designating the documents with a unique Bates Number prefix.

18 c) Lost, Destroyed, or Irretrievable ESI. If a Producing Party learns that responsive
19 ESI that once existed was lost, destroyed, or is no longer retrievable as a result of acts or
20 circumstances not occurring in the ordinary course of business, the Producing Party shall explain
21 where and when the responsive ESI was last retrievable in its original format and to disclose the
22 circumstances surrounding the change in status of that responsive ESI, whether that information is
23 available from other sources, whether any backup or copy of such original responsive ESI exists.

24

1 d) Re-productions. Notwithstanding any provisions to the contrary, re-production of
2 discrete sets of documents from another litigation, arbitration, government inquiry, or other matter
3 may be re-produced in the same manner and form as originally produced in the other matter,
4 provided however that a party may, upon reasonable request and for good cause shown, re-
5 produce documents in a different format. This provision does not waive the right of a party to
6 object to any requests for reproduction of production files from another litigation, arbitration,
7 government inquiry, or other matter.

8 e) Protective Order. Documents produced by the Parties are subject to the terms of the
9 Protective Order [Dkt. 176] entered in this Litigation.

10 f) Production Log. With each production of documents, the producing party shall
11 produce a log that contains the following information: (i) Production volume number; (ii) Date of
12 the production; (iii) Bates range for the production; (iv) Sources of information from which the
13 documents are being produced (e.g., names of custodians or noncustodial sources); (v) Other
14 relevant information about the production (i.e., whether the production is an overlay file for a
15 previous production). The log should be supplemented with each production such that each
16 version contains all previous productions on the log along with the new production information.

17 g) Modification. This ESI Order may be modified by a Stipulated Order of the Parties
18 or by the Court for good cause shown.

19 h) Good Faith. The Parties will act in good faith as required by law and use these
20 procedures to identify and reduce the potential for disputes.

21 i) Continuing Obligations. The Parties recognize that discovery shall be an iterative
22 and cooperative process. The Parties will continue to meet and confer regarding any issues as
23 reasonably necessary and appropriate. This Order does not address or resolve any objections to the
24 Parties' respective discovery requests.

9 IT IS ORDERED that the forgoing Order is approved.

10 | DATED:

Hon. Charles R. Breyer

APPENDIX 1: PRODUCTION FORMAT

1. Production Components. Except as otherwise provided below, ESI must be produced in accordance with the following specifications:

- a) an ASCII delimited data file (.DAT) using standard delimiters;
- b) an image load file (.OPT) that can be loaded into commercially acceptable production software (e.g. Concordance);
- c) single page black-and-white TIFF or color JPEG images, or native files with single page placeholder TIFF images, depending on the applicable production format for each type of file;
- d) and document level .TXT files for all documents containing extracted full text or OCR text.
- e) Family relationships (be that email, messaging applications, or otherwise) will be maintained in production. Attachments should be consecutively produced with their parent. “Attachments” shall be interpreted broadly and includes, e.g., traditional email attachments and documents embedded in other documents (e.g., Excel files embedded in PowerPoint files) as well as modern attachments, internal or non-public documents linked, hyperlinked, stubbed or otherwise pointed to within or as part of other ESI (including but not limited to email, messages, comments or posts, or other documents). Objects, documents or files embedded in documents, such as OLE embedded objects (embedded MS Office files, etc.), or images, etc., embedded in RTF files, shall be extracted as separate files and treated as attachments to the parent document. Chats from programs like Slack and HipChat should be produced in families by channel or private message.
- f) If a particular document warrants a different production format, the Parties will

1 cooperate in good faith to arrange for a mutually acceptable production format.

2 2. Production Media and Access Controls. Productions must be encrypted and produced
3 through secure electronic means, such as secure file sharing methods (e.g. FTP), or on CD, DVD,
4 flash drive or external hard drive (“Production Media”). Nothing in this ESI Order will preclude or
5 impair any and all protections provided the Parties by any Protective Order(s) agreed and entered
6 into by the Parties. Parties will use best efforts to avoid the unnecessary copying or transmittal of
7 produced documents. If questions arise, the Parties will meet and confer to ensure security
8 concerns are addressed prior to the exchange of any documents.

9 3. Data Load Files/Image Load Files. Each TIFF in a production must be referenced in the
10 corresponding image load file. The total number of documents referenced in a production’s data
11 load file should match the total number of designated document breaks in the image load file(s) in
12 the production. The total number of pages referenced in a production’s image load file should
13 match the total number of TIFF files in the production. The total number of documents in a
14 production should match the total number of records in the data load file. Load files must not vary
15 in format or structure within a production, or from one production to another except by agreement
16 of the Parties.

17 4. Metadata Fields. Defendants shall use methods of collection and processing that preserve
18 the integrity of document metadata, and of parent-child and family group relationships such as the
19 association between attachments and parent documents, or between embedded documents and
20 their parents, or between documents, including, but not limited to, emails (e.g., Outlook, Gmail) or
21 messaging or communication posts (e.g., Slack, Teams, Google Hangouts, Google Chat), with
22 document stubs or links or pointers to internal or non-public (e.g., Google Workspace, Zendesk)
23 documents and those stubbed or internal or non-public documents so linked. Documents
24 containing hidden URLs, e.g., an email containing a link where the text of the link is not the URL

1 (for example, a link with the displayed text “Please review this article” where the URL of the link,
2 e.g., <https://somesite.com/somearticle.html/>” is not itself the display text of the link) should be
3 processed such that all hidden URLs are included in the extracted text.

4 The metadata fields detailed in Appendix 2 should be produced for each Document to the
5 extent that such information is available or, in the case of metadata created during processing such
6 as Bates numbers created at the time of collection and processing, except that if a field contains
7 privileged information, that privileged information may be redacted and noted in a corresponding
8 privilege log.

9 5. TIFFs. Unless excepted below, single page, black and white, Group IV TIFFs should be
10 provided, at least 300 dots per inch (dpi) for all documents. If the receiving party is not satisfied
11 with the quality of TIFFs for particular images, it may request the producing party to produce
12 those images in native format. In addition, the Parties shall take reasonable efforts to process word
13 processing documents (e.g., MS Word) with track changes and/or comments unhidden on the
14 TIFF image.

15 6. Bates Numbering. All produced ESI must be assigned a unique Bates number that is
16 sequential within a given document and across the production sets, along with a confidentiality
17 designation. The producing party will brand all TIFF images in the lower right-hand corner with
18 its corresponding Bates number, using a consistent font type and size. The Bates number must not
19 obscure any part of the underlying image. If the placement in the lower right-hand corner will
20 result in obscuring the underlying image, the Bates number should be placed as near to that
21 position as possible while preserving the underlying image. Original document orientation should
22 be maintained (i.e., portrait to portrait and landscape to landscape). Bates numbering should be a
23 consistent length across the production, contain no special characters, and be numerically
24 sequential within a given document. The Bates Numbers in the load file must match the

1 corresponding documents' beginning Bates numbers in the data load file. If a Bates number or set
2 of Bates numbers is skipped, the skipped number or set of numbers should be noted with a
3 placeholder. Attachments to documents will be assigned Bates numbers that directly follow the
4 Bates numbers on the documents to which they were attached. In addition, wherever possible,
5 each image will have its assigned Bates number electronically "burned" onto the image.

6 7. Color. Any ESI that is not an email communication and contains color will be processed as
7 a JPEG file at 300 DPI. Where the receiving party reasonably suspects that particular email
8 communications contain color that is necessary to determine the meaning of the communication,
9 the receiving party may make reasonable and proportionate requests for particular email
10 communications to be produced in color. The Parties agree to meet and confer regarding such
11 requests as appropriate. A Party making such a request shall make the request by individual Bates
12 number(s) and shall limit requests made pursuant to this paragraph to a reasonable number of
13 documents.

14 8. Text Files. A single text file shall be provided for each document. The text file name shall
15 be the same as the Bates number of the first page of the document with the document extension
16 ".txt" suffixed. File names shall not have any special characters or embedded spaces. Electronic
17 text must be extracted directly from the native electronic file unless the document requires
18 redaction and is not a spreadsheet, is an image file, or is any other native electronic file that does
19 not contain text to extract (*e.g.*, non-searchable PDFs). In these instances, and in the case of
20 imaged hard-copy documents, a text file shall be created using OCR and shall be produced in lieu
21 of extracted text. Text shall be provided in UTF-8 format. Extracted text shall be generated with
22 commercially acceptable technology set to include all comments, revisions, tracked changes,
23 speaker's notes and text from documents with comments or tracked changes, and hidden and very
24 hidden worksheets, slides, columns and rows as well as all URLs. When possible, the text of

1 native files should be extracted directly from the native file. Parties will use their best efforts to
2 OCR foreign language documents using the appropriate setting for those languages, although that
3 may require additional process. Text files will not contain the redacted portions of the documents.
4 A commercially acceptable technology for optical character recognition (“OCR”) should be used
5 with the highest quality setting during processing for all scanned, hard copy documents, and for
6 documents with redactions other than Excel files and other spreadsheets which shall be redacted in
7 native format. Text extracted from emails should include the following header information where
8 available: (1) the individuals to whom the communication was directed (“To”), (2) the author of
9 the email communication (“From”), (3) who was copied and blind copied on such email (“CC”
10 and “BCC”), (4) the subject line of the email (“RE” or “Subject”), and (5) the date and time of the
11 email. Text extracted from emails and other documents should also be generated with
12 commercially acceptable technology set to include the text of any URLs or links, e.g., if an email
13 contains a link like “Please review these rules” where “these rules” is a URL to a destination such
14 as “[https://www.cand.uscourts.gov/notices/newnotice- proposed-modifications-to-civil-local-
rules/](https://www.cand.uscourts.gov/notices/newnotice-proposed-modifications-to-civil-local-rules/)”, then the extracted text must include the URL as well as the linked text “these rules.”

16 9. Native files. All spreadsheet files (e.g., Microsoft Excel or Google Sheets), as well audio
17 and video files, shall be produced as native files with TIFF placeholder images. Spreadsheet files
18 requiring redaction, including Microsoft Excel files, will be redacted within the native file, and the
19 redacted native file will be produced as provided herein. Moreover, to the extent a spreadsheet file
20 is a Google Sheet, this will be provided in a Microsoft Excel format. To the extent that they are
21 produced in this Litigation, audio, video, and multi-media files will be produced in native format.
22 The Parties will meet and confer on the production of other file types, such as proprietary files,
23 etc. Native files will be produced with a link in the NATIVEFILEPATH field, along with
24 extracted text (where extracted text is available) and applicable metadata fields set forth in

1 Appendix 2. A Bates numbered TIFF placeholder indicating that the document was provided in
2 native format must accompany every native file. Where redaction makes production of native-
3 format files other than spreadsheets or presentations infeasible, the Parties will confer to determine
4 a reasonably usable form for the production, but spreadsheets shall presumptively be redacted in
5 native, and presentations presumptively redacted in image form, in these cases without the need
6 for further conferring.

7 10. Production Format for Hard Copy Documents. In scanning paper documents, documents
8 are to be produced as they are kept. For documents found in folders or other containers with
9 labels, tabs, or other identifying information, such labels and tabs shall be scanned where
10 practicable. Pages with Post-It notes shall be scanned both with and without the Post-it, with the
11 image of the page with the Post-it preceding the image of the page without the Post-It. Hard copy
12 documents will be made text searchable. The producing party will use best efforts to unitize
13 documents (*i.e.*, distinct documents should not be merged into a single record, and a single
14 document should not be split into multiple records), and maintain document relationships, *i.e.*,
15 attachment status. Original document orientation (*i.e.*, portrait v. landscape) should be maintained.

16 11. Confidentiality Designation. All images will be stamped with the appropriate
17 confidentiality designations in accordance with the Stipulated Protective Order entered in this
18 litigation. Each document produced in native format will have its confidentiality designation
19 identified in the filename of the native file and indicated on its corresponding TIFF placeholder.

20 12. Databases and Other Data Sources. The Parties shall meet and confer regarding the
21 production and format and scope of relevant structured data or aggregated or threaded data source
22 or otherwise maintained by an application (e.g., Microsoft Teams, Slack, Microsoft Access,
23 SharePoint, Oracle, Salesforce, ACT!, or any other messaging or proprietary databases or services)
24 in order to ensure that any information produced is reasonably usable by the Receiving Party and

1 that its production does not impose an undue burden on the Producing Party. The Parties will
2 cooperate in the exchange of sufficient information concerning such databases to facilitate
3 discussions on the production of responsive information, including available data fields/objects
4 and schema. To the extent a Party is constrained from producing responsive ESI because of a
5 third-party license or because software necessary to view the ESI is hardware dependent, the
6 Parties shall meet and confer to minimize any expense or burden associated with the production of
7 such documents in an acceptable format, including issues as may arise with respect to obtaining
8 access to any such software and operating manuals.

9 13. Embedded Objects. OLE embedded objects (embedded MS Office files, etc.) shall be
10 extracted as separate files and treated as attachments to the parent document. Images embedded in
11 emails shall not be produced separately. Parties agree non-substantive embedded objects,
12 including, but not limited to, logos, icons, emoticons, and footers need not be produced as separate
13 documents by a Producing Party (i.e., such embedded objects will be produced within the
14 document itself, rather than as separate documents). Embedded files, except for images and non-
15 substantive embedded objects (including but not limited to, logos, icons, emoticons), are to be
16 produced as family groups. Embedded files should be assigned Bates numbers that directly follow
17 the Bates numbers on the documents within which they are embedded.

18 14. Production of Family Groups and Relationships. If any member of a family group is
19 produced, all members of that group must also be produced or else logged as privileged, and no
20 such member shall be withheld from production as a duplicate.

21 15. Dynamic Fields. Documents with dynamic fields for file names, dates, and times will be
22 imaged to show the field code (e.g., “[FILENAME]”) where possible, rather than the values for
23 such fields existing at the time the file is processed.

24 16. Time Zone. All provided metadata pertaining to dates and times will be standardized to

1 UTC.

2 17. Redactions. Other than as permitted by this Order or the Protective Order entered in this
3 Action, no redactions for relevance may be made within a produced document or ESI item. The
4 Parties agree to meet and confer on a case-by-case basis if a Party believes there is a good faith
5 basis to permit limited redaction by agreement of the Parties of highly sensitive, non-relevant
6 information within a Document that contains other relevant information. Any redactions shall be
7 clearly indicated on the face of the document, with each redacted portion of the document stating
8 that it has been redacted and the type of the redaction, and a metadata field shall indicate that the
9 document contains redactions and the type of the redaction (e.g., “Privacy” or “Privilege”). Where
10 a responsive document contains both redacted and non-redacted content, the Parties shall produce
11 the non-redacted portions of the document and the OCR text corresponding to the non-redacted
12 portions.

13 18. Spreadsheets. Spreadsheet files requiring redaction, including without limitation Microsoft
14 Excel files, will be redacted and produced natively.

15 19. Other Documents. All images of redacted native files shall be processed to show and
16 reveal all comments, revision marks, speaker notes, or other user-entered data which are visible in
17 any view of the exported document. Where possible, any occurrences of date/time auto-field
18 items, including in headers and footers, will be removed and replaced with the term AUTODATE
19 to prevent the current date from being printed. Email header information (e.g. date, subject line,
20 etc.) should not be redacted unless it is independently privileged. The production of a document in
21 a redacted form does not affect the Parties’ obligation to timely assert and substantiate the
22 assertion of privilege over the content in a privilege log. The Parties shall honor reasonable
23 requests for the production of particular redacted documents in other formats where the image is
24 not reasonably usable.

1 20. Color. Redacted versions of Documents that would have been produced in color in their
2 un-redacted form shall be produced in color as detailed herein.

3 21. Exception Files. The Parties will use reasonable efforts and standard industry practices to
4 address Documents that present imaging or form production problems (including encrypted and/or
5 protected files identified during the processing of ESI) (“Exception Files”). The Parties will meet
6 and confer regarding procedures that will be used to identify, access, and process Exception Files.
7 In the event that the Parties cannot reach agreement on the handling of Exception Files through the
8 meet and confer process, the matter may be submitted to the Court for determination.

9 22. Mobile and Handheld Device Documents and Data. If responsive and unique data that can
10 reasonably be extracted and produced in the formats described herein is identified on a mobile or
11 handheld device, that data shall be produced in accordance with the generic provisions of this
12 protocol. To the extent that responsive data identified on a mobile or handheld device is not
13 susceptible to normal production protocols, the Parties will meet and confer to address the
14 identification, production, and production format of any responsive documents and data contained
15 on any mobile or handheld device.

16 23. Parent-child relationships. If responsive, Parent-child relationships that have been
17 maintained in the ordinary course of business shall be preserved for both ESI and hard copy
18 Documents. For example, for electronic production of a hard copy folder with Documents
19 contained in the folder, the cover/title of the folder shall be produced first, with all contents of the
20 folder in sequential Document order behind the containing folder. For email families, the parent-
21 child relationships (the association between emails and attachments) should be preserved, i.e.,
22 email attachments should be consecutively produced with the parent email record.

23 24. Encrypted or Password-Protected ESI. For any ESI that is produced in encrypted format or
24 is password-protected, the producing party will provide the propounding party a means to gain

1 access to those native files (for example, by supplying passwords.)

1 **APPENDIX 2 – METADATA FIELDS**

2 Field	3 Definition	4 Doc Type
5 ALLCUSTODIAN	6 Name(s) of person(s) or 7 other data source (non- 8 human) from where 9 documents/files are 10 produced. <i>Where redundant 11 names occur, individuals 12 should be distinguished by 13 an initial which is kept 14 constant throughout 15 productions (e.g., Smith, 16 John A. and Smith, John B.)</i>	17 All
18 BEGBATES	19 Beginning Bates Number (production number)	20 All
21 ENDBATES	22 Ending Bates Number (production number)	23 All
24 PGCOUNT	25 Number of pages in the 26 document	27 All
28 FILESIZE	29 File Size	30 All
31 APPLICAT	32 Commonly associated 33 application for the specified 34 file type.	35 All
36 FILEPATH	37 Original file/path of the 38 location where the item was 39 located at the time of 40 collection, where 41 applicable. This should 42 include location, and, for e- 43 documents and e- 44 attachments, file name, and 45 file extension. Folder 46 names and path should be 47 included, and, for emails 48 and attachments collected 49 from a container such as a 50 .pst, the full folder path 51 within the container. Any 52 container names should be 53 included in the path.	54 E-document, Email, excluding 55 cloud-based documents. Equivalent 56 fields are included in the Google 57 Drive & Linked Documents & 58 Google Mail section below.
59 FILENAME	60 Original file name at the 61 point of collection	62 E-Document.

Field	Definition	Doc Type
NATIVEFILELINK	For documents provided in native format only	All
TEXTPATH	File path for OCR or Extracted Text files	All
LINKBEGBATES	One-to-many field used to identify the beginning Bates value for any Google Drive linked documents referenced within a given Gmail document	Gmail documents containing linked Google Drive documents
LINKSOURCEBEGBATES	One-to-many field used to identify the beginning Bates value for any source Gmail documents linking to a given Google Drive document	Google Drive documents linked to Gmail documents
MSGID	Email system identifier assigned by the host email system. This value is extracted from parent message during processing	E-mail
FROM	Sender	E-mail
TO	Recipient	E-mail
CC	Additional Recipients	E-mail
BCC	Blind Additional Recipients	E-mail
SUBJECT	Subject line of e-mail	E-mail
PARENTMSGID	Where the item is an email which is a REPLY or FORWARD, the ConversationID of the original email which was REPLIED to or FORWARDED	E-mail
CONVERSATIONID	Email thread identifier	E-mail
ATTACHBATES	Bates number from the first page of each attachment	E-mail
BEGATTACH	First Bates number of family range (i.e. Bates number of the first page of the parent e-mail or document)	E-mail, E-Documents

Field	Definition	Doc Type
ENDATTACH	Last Bates number of family range (i.e. Bates number of the last page of the last attachment or, if no attachments, the document itself)	E-mail, E-documents
ATTACHCOUNT	Number of attachments to an e-mail	E-mail
ATTACHNAMES	Names of each individual Attachment, separated by semi-colons	E-mail, E-documents
DATESENT (mm/dd/yyyy hh:mm:ss AM)	Date Sent	E-mail
DATERCVD (mm/dd/yyyy hh:mm:ss AM)	Date Received	E-mail
SORTDATE (mm/dd/yyyy hh:mm:ss AM)	Date of the parent e-mail or document	E-mail and documents
HASHVALUE	MD5 hash value	All
TITLE	Internal document property	E-document
AUTHOR	Internal document property	E-document
DATECRTD (mrn/dd/yyyy hh:mm:ss AM)	Creation Date	E-document
LAST MODIFIED BY	Last person who modified (saved) a document	E-document
LASTMODD (mrn/dd/yyyy hh:mm:ss AM)	Last Modified Date	E-document
HiddenContent	Denotes if file contains hidden content. Format: Yes/No value.	Loose files and attachments.

Field	Definition	Doc Type
DocumentType	Descriptor for the type of document: “ E-document ” for electronic documents not attached to e-mails; “ E-mail ” for all e-mails; “ E-attachment ” for files that were attachments to e-mails; “ Physical ” for hard copy physical documents that have been scanned and converted to an electronic image; and “ Messaging Application ” for all Messages related to Messaging Applications e.g., Slack, HipChat, uChat, WhatsApp, Google Chat, and GroupMe.	All
Importance	High Importance - indicates Priority E-mail message.	E-mail
Redacted	Descriptor for documents that have been redacted. “Yes” for redacted documents; “No” for un-redacted documents.	All
ProdVol	Name of media that data was produced on.	All
Confidentiality	Confidentiality level if assigned pursuant to any applicable Protective Order or stipulation.	All

1 Field	2 Definition	3 Doc Type
2 The following fields should be included ONLY if de-duplication is allowed.		
3 Other Custodians	4 Custodians of all duplicate documents. Multiple values separated by semi-colons.	5
6 Duplicate Filepaths	7 Original file/path of the locations where the unproduced duplicate items were located at the time of collection. This should include location, and, for e-documents and e-attachments, file name, and file extension. Folder names and path should be included, and, for emails and attachments collected from a container such as a .pst, the full folder path within the container. Any container names should be included in the path. Multiple values should be separated by semi-colons.	8 E-Document
